4. TAXONOMY REGULATION

The Taxonomy Regulation is a piece of directly effective EU legislation that is applicable to the Fund. Its purpose is to establish a framework to facilitate sustainable investment. It sets out harmonised criteria for determining whether an economic activity qualifies as environmentally sustainable and outlines a range of disclosure obligations to enhance transparency and to provide for objective comparison of financial products regarding the proportion of their investments that contribute to environmentally sustainable economic activities. It is notable that the scope of environmentally sustainable economic activities, as prescribed in the Taxonomy Regulation, is narrower than the scope of sustainable investments under SFDR. Therefore although there are disclosure requirements for both, these two concepts should be considered and assessed separately. This section addresses only the specific disclosure requirements of the Taxonomy Regulation.

Given the Fund's investment focus and the asset classes/sectors it invests, the Investment Manager does not integrate a consideration of environmentally sustainable economic activities into the investment process for the Fund. Therefore, for the purpose of the Taxonomy Regulation, it should be noted that the investments underlying the Fund do not take into account the EU criteria for environmentally sustainable economic activities.
